

2. EBIT Margins:

This stands at below 20 percent level, meaning that the company has a lot of indirect costs, be it marketing, employee related, etc. We can see that about 30% of revenue is spent as indirect costs. We have understood these in detail during common size analysis of the income statement.

3. PAT Margins:

PAT margins have increased in the last few years from 14.1% in 2016 to 16% in FY21. We can therefore, say that the PAT has been quite constant and has not increased/grown significantly.
