

We can look for these items in the balance sheet to know if the company has any tax-related assets or liabilities. Tax assets and liabilities can become a significant amount for the company and have major financial implications. We need to understand these well. We need to understand any advance taxes paid and if so, when will it be recovered?

We look at Net DTA/DTL w.r.t Total Assets.

Here, we find how large DTA and DTL are compared to the total assets.

we find how large DTA and DTL are compared to the total assets.

Check for any significant tax credit, advance						
Net DTA w.r.t Total Assets	0.1%	0.1%	0.1%	0.2%	0.2%	0.2%
Net DTL w.r.t Total Assets	2.2%	1.9%	2.1%	2.0%	1.3%	4.5%

Analyzing this, we see that the deferred tax liabilities ratio have gone up in the last year. The balance sheet shows us total deferred liabilities of 398.03 crores in the final year. This might be due to the acquisition. We will need to look into the notes to investigate the reasons for this.

These questions help us understand the size of deferred tax assets and liabilities. Both numbers should not be too large, or they may lead to liabilities and create future cash flow problems. In this case, the deferred tax liability ratio climbed to nearly 5% in the last reported year. We need to therefore understand this in greater detail.
