

We see the following regarding ESOPs:

The number of ESOPs that have been granted,

The fair value as of the grant date,

The current fair value,

The number of ESOPs that have been exercised,

The remaining ESOPs.

All these questions will give us the number of equity shareholders that will be issued when all the ESOPs are exercised against the total equity numbers.

Next, we need to understand the ESOP policy of the company. From the entire Notes to Accounts and the director's notes, we will find the ESOP policy of the company. The policy will show the frequency with which ESOP is granted by the company, whether every few days or every few months.

We need to know how many ESOPs are being granted and at what point. This pattern in ESOP policy needs to be understood. In the policy, we can see how many ESOPs were given out and how many of them are yet to be exercised.
