

Another table titled “information on subsidiary companies” gives us the total asset value for each company. So, this is how we identify large companies and check their performance, including their

Looking under turnover, we find these companies- **Nina Percept and ICA Pidilite-** that **have relatively larger combined revenue than all other subsidiaries.** We focus on these companies and understand the quality of businesses. **The numbers show 178 crores and 175 crores,** but after checking the profit after tax, we see that the company is not making any money.

Even though these companies are not very profitable by themselves, there could be several reasons for creating subsidiaries. However, since we don't have access to that information, we wouldn't really understand them. And trying to understand them would not be the best use of our time in any case from an analytical point of view. We may do that if the scope of analysis is wide.
