

A. Thus, most of the increase in revenue has been coming from Industrial products as a segment. Significant growth is seen in Industrial products in FY 2019. This is probably due to the fact that assets were acquired in this particular category.

B. Consumer Products have not grown that much. Going to annual inputs, we find that the revenue for Industrial Products has almost doubled.

We need to know which segments contribute the most to revenue and how that changes over time. Also, we need to know which segment has how much of the company's total assets invested in them. Thirdly, we need to know how profitable the segment is. This way, we can understand the large segments that are growing, the ones that are more profitable, and the ones where the company is increasingly investing.

This is how we can understand the different segments and their performance with respect to total revenue.

Growth rate in revenues					
Sale of Products	7%	3%	2%	3%	4%
Sale of Services	4%	1%	80%	-27%	25%
Other operating Revenue	7%	14%	57%	-15%	-48%
