

10.9

ADDING SECTOR-SPECIFIC KPIs

In the previous section, we discussed analysis and templates. We can customize the templates for every industry. We can include industry-specific metrics. For example, in BFSI and the banking industry, these numbers might not be appropriate. For example, we might need to change the gross profit parameter with NII (Net Interest Income) or service-related income. We can also create additional tabs to track items like:

NII

Service Related
Income

Net Interest margin

Gross Non-performing
Assets (GNPA)Net Non-performing
Assets (NNPA)

Asset Liability Match

Capital Adequacy
Ratio (CAR)

We can either make changes in the templates or add things specific to the industry. Adding things is easier by leaving irrelevant parameters blank. For the hotel industry, we can include KPIs like:

1

Number of rooms

Occupancy Ratio

2

3

Revenue per available
room
