

Exclusivity

These include items like Patents, Trademarks, etc., that provide exclusivity to the company.

Here, we do not look at the value of the trademark or the patent. However, trademark provides some form of exclusivity to the company. Assets like trademarks and copyrights provide the company exclusivity over the use of its name. In many cases these patents, copyrights etc may allow company to charge higher prices and make additional profits. Most of the value of such companies like Pharmaceutical companies is such assets that provide exclusivity.

Normal Assets

These include all other intangible assets or expenses that provide future economic benefits to the company. Examples are- Advertisements, Software, etc.

Advertisements

Softwares

This way we need to segment all Intangible assets into either of these categories. If company has most assets that provide exclusivity to the business those assets are most valuable. Assets that have no future benefit are least valuable. The above is how we break down and understand Intangible assets.
