Entering Data in Spreadsheets

The last chapter covered several terminologies critical to understanding Financial Statement Analysis. And now, we shall proceed with a template. A Template is a skeleton format that can be used to conduct our financial statement analysis. You can download the template in excel format for this and we will discuss how to build on this template. However, there is no one-size-fits-all with these templates. It can be freely customized as per your specific needs and objectives. There is no hard and fast rule for the template that it has to be a particular way.

However, for this book, we shall use a template, which can be found in the download section. You can also download the same from the QR code below.

Scan here for the template!
