

1.2 JOURNEY OF ZEBRALEARN

It is important for us to share our journey to establish the context. ZebraLearn was established in 2020. The company has two parts.

ZebraPro is a software tool meant for institutional investors.

Zebrapro is where we use data science and algorithms and build software for equity research analysts. Equity research analysts are professionals who work at mutual funds and take investment decisions for the capital.

Zebrapro aims to reduce the time it takes to collect data to form investment decisions.

ZebraLearn is an online education platform focusing majorly on the finance field.

We offer multiple books and courses. We also have our own community and a dedicated app for our learners.

Here is a timeline outlining our journey towards raising the first round:

DEC 2019

We started our operations

AUG 2020

We worked on pilot tests and early user feedback till August 2020. We sold products worth Rs. 4 Lacs in August 2020 which gave us the confidence that market values what we were working on. As a result, we started to prepare to raise capital. At that point, we had a small team of 3-4 members.

OCT 2020

We had our first investor meeting
