

YOU HAVE TO BE MENTALLY PREPARED THAT EVERY SLIDE WILL BE READ IN LESS THAN 10 SECONDS.

When creating the pitch deck, use pen, paper or digital ppt to create raw content with perfect placement. You can then give the same to designers to correct into designed format. You can even hire an intern or a student to do this for you and this should be generally not be expensive. It makes your company looks professional. You can also use tools like canva to design the pitch deck yourself.

REMOVE UNNECESSARY INFORMATION

While designing, delete any information that you find unnecessary. So whenever you start creating the rough draft, you will want to include as much information as possible. But in the end, you have to remove things that are not important to the investor. You only need to share relevant information. You don't want to put everything in the pitch deck. The references will come in useful. Make sure that your business is well explained in the deck.
