

09. Create Pictorial Representations

Try to develop as many pictorial representations as possible. As you know, your pitch deck will be skimmed through and not read. So you will want things that will catch the investor's eyes. You don't want the investor to spend a lot of effort and time reading a lot of words. If you have enough pictorial representation, the investors can quickly go through your pitch deck. If they have too much to read, they can always move on to the next pitch mid way. Show everything possible pictorially, even if it is a problem statement or a solution. You can use diagrams, flowcharts, pie charts, etc.

10. Design It

Once you are done with the above three steps, start designing your pitch deck. Many founders go ahead with a pitch deck with basic colors, fonts, and features available in PPT. But it is always a professional design done for Rs. 4000 a design student to do it.

You can even use Canva, to design the pitch deck. Designing makes your pitch deck look much more professional. However, your content must be the priority. Ultimately your business levels will help you raise these things help you look
