

Thus your paid conversions would be $500 \times 30\% \times 30\% = \text{Rs}45$ in the next month. Similarly, you can calculate conversion for upcoming months too.

You can now arrive at the revenue by multiplying the number of paid conversions with your selling price (say Rs. 1000).

Thus, your revenue would be Rs. 45,000, 72,000, 90,000, and 1,08,000 in the coming months.

Thus, rather than making guesses, you must make logical guesses. Here, the investors understand much better on how you are forecasting revenue.
