

## 8. YOUR NUMBERS MUST BE ACCORDING TO THE BUSINESS ECONOMICS

The numbers must not be random but should make economics sense as per the business. You cannot include numbers out of thin air which do not make sense as per the business.

If you are spending a huge amount of money on customer acquisition, you need to check whether you get repeat business from these customers. If you are not getting that, then spending funds constantly on acquisition is not the best use of capital.

Your Financial Projections should not be far away from your Business Economics.

Take some time off and create realistic projections that reflect your business.

It is recommended that you create this projection yourself, as no third party will understand your business or your thought process better than you. Take some time off and create a very realistic financial projection.

**F** **KS** [REDACTED] le who understand finance a finance background. But you must identify the KPIs and enter the numbers by yourself.
