

- Cement consumption has grown at a CAGR of 4.3% since 2012.
 - The industry is expected to grow 6-8% in volume terms till FY25.
 - Growth drivers going forwards:
 - Government initiatives going forward (smart cities, PMAY) and push on infrastructure.
 - Strong growth in rural housing.
 - Favourable demographics.
 - Rising demand in industrial sector.
- The method used for such basic demand analysis is secondary data from industry research reports. However, this has also been confirmed from individual management commentary.
 - There is no substitute for cement. Prices are determined in commodity markets, which are region specific.

So, we can conclude that the cement industry has a stable and steady demand growth outlook.
