

Autonomous Cars Industry

- Industry in Innovation Phase

Companies across the globe are working on developing and innovating various models of autonomous cars.

A variety of Indian startups are working on the same.

- **Hi Tech Robotic Systemz:** Gurgaon-based startup that developed Novus Drive - a completely autonomous EV.
- **ATI Motors:** Bangalore-based company that is designing electric cargo vehicles.
- **Auro Robotics:** Developed self-driving shuttle, being run in University of Santa Clara.
- **Fisheyebox:** Kolkata-based startup that has an autonomous Celerio that can be run by a joystick.

**As of 2020*

Various other companies are working on products with varying degrees of success. A lot of Japanese, American and Chinese players are also working on the same.

Characteristics of the Industry

- Lack of knowledge among customers
- Low and Slow Sales
- Proof of concept not yet established
- High prices
- Narrow product lines

The above feature can help us identify the industries in the innovation phase.
