

Tata Nano - A Low-End Disruption

- To make cars more affordable and accessible, Tata Motors in India created Nano.
- It made cars more accessible by removing many extra features.
- The car created immense functional utility.
- However, the car failed in creating social utility. It was looked down upon.

However, the concept of Nano was a low-end disruption that allowed many to give up two-wheelers and become first-time car owners.

Virtual Schools - A Low-End Disruption

- Traditional schools have been providing a lot of benefits- one-on-one attention and supervision.
- However, not everyone needs such attention.
- Some wish to learn at their own speed and at a cheaper rate.
- Also, some stay in difficult geographical locations.
- This is why virtual schools and online courses have found great success.

Online courses and virtual schools have allowed many students to learn otherwise expensive skills. As a result, many offline institutions have also opened virtual training divisions.
