

Availability of Regular Supply

(Easy/Moderate/Difficult/Seasonal or Non-Seasonal)

Not all raw materials are available all the time with ease.

Degree of Supply	Supplier Power	Note
Irregular Supply/ Availability is difficult		It requires firms to plan and maintain buffer stocks of raw materials, to avoid losing production time.
Regular Supply/ Availability is easy		If availability is easy, firms in the industry will always have a choice and thus face low supplier power.

At times there can be long dry spells of supply. When supply comes back, suppliers can find themselves with high supplier power and increase prices.

Also, supply can be seasonal. If it is so, the product has to be stored. Due to a spike in demand, suppliers can have significant bargaining power during periods of supply.

Raincoat, Boots and Umbrellas used in monsoons.

Fruit juices use seasonal raw materials.
