

Major Trends affecting Logistics Industry in India

Major trends that are affecting the logistics segment include:

- Focus on automation
- Asset-light model
- Focus on technological advancements in various fields relation to logistics
- Modern warehouses over traditional warehouses
- Multi-modal integrated network
- Extended use of 3PL services by different sectors
- Last-mile delivery analytics
- Making the logistics network more flexible and adaptive

Investors as well as business analysts must be on the lookout to see how these trends would affect the industry going forward and how they can benefit from them.
