

Gain Creators by Agrochemical Industry

Lab-Tested Crop Solutions

Lab-tested solutions create more assurance in the minds of customers about what performance can be expected from the product.

Government Approved Product

Not all agrochemicals can be used by the farmers. Only those that are approved by the government can be used. Unapproved products invites litigation risks.

Retailer Training

Retailers need to be trained to provide information to the buyers about usage. Beside usage guidance, they can also help in creating awareness.

Helpline

Companies need to establish a helpline so as to resolve specific farmer queries at different stages of the entire process.

Standard Application Equipments

Some products require specialised application equipment, whereas others can use standard equipment. Standard application reduces entry barriers and creates gains for the customer.

**Not all gains that are required can be created.
Firms that can create more gains at a cheaper
rate strengthen value proposition.**
