

The features that create value should be identified and the way value is delivered should be articulated.

Take time to do the customer profiling. Do not rush this process.

**Customers keep changing.
So, customer profiling and
product changes are ongoing
processes.**

While evaluating disruptions and their risks, the value proposition model is key to checking if the disruptor would be successful or not. This helps compare and contrast the substitute industry and the original industry. The industry that creates the most value will survive over the others.

Petroleum Vehicles

v/s

Electronic Vehicles

The model will provide an objective regarding the pains and gains created by both industries, how they are perceived by the customers, and which offers a stronger value proposition against the price paid. The one with the stronger proposition in the industry will do better going forward.

Within industries, the value proposition model can be used to identify the businesses that are offering a stronger value proposition and replace the weaker ones going forward. This can be used to track any innovation within the industry to create more value for the customers. Thus, the value proposition model should be used at both the industry level and the business level.
