Samsung Galaxy S25 series expected to launch with major design changes

The Samsung Galaxy S25 series India launch is not so far. In fact, if rumours are to be believed, Samsung plans to launch the Galaxy S25 series in India earlier than planned. Just like the last few years, Samsung should launch 3 phones as part of the series – Samsung Galaxy S25, Galaxy S25 Plus and Galaxy S25 Ultra. While the last will get the most special treatment and show us what Samsung is truly capable of, it's the Samsung Galaxy S25 that most people can afford.

The Samsung Galaxy S25 launch date is yet to be announced. However, it is expected to be launched on January 22, alongside the Galaxy S25 Plus and Galaxy S25 Ultra. Samsung is unlikely to make a major change to the design of the Galaxy S25. It has stuck to the same design philosophy over the last years for its flagship phones and the S25 should get a similar treatment. This means the Galaxy S25 will have a glass finish with the same camera rings as the Galaxy S24. You can also expect Samsung to introduce new colours with the phone. The Samsung Galaxy S25 Ultra is expected to have a more streamlined design this time. It can go completely flat with the design and can carry a slimmer body with thinner bezels. On the rear, the camera rings are expected to be thicker than those on the Galaxy S24 Ultra.

The S25 Ultra can carry a slightly bigger 6.9-inch display, compared to last year's 6.8-inch display. Even the peak brightness is expected to be increased from the current 2,600 nits on the S24 Ultra. It can run on Qualcomm's latest Snapdragon 8 Elite chipset and comes with One UI 7.0. <https://bit.ly/4i11QwV>

Microsoft announces Mac Mini sized desktop PC

Microsoft has unveiled a new compact desktop device, the Windows 365 Link, which is roughly the size of a Mac Mini. Windows 365 Link is the first Cloud PC device purpose-built by Microsoft to connect securely to Windows 365 in seconds. The new device comes with a unique twist: it doesn't run a traditional local operating system. Instead, it streams Windows from the cloud, requiring an internet connection to function. The Windows 365 Link is tailored for desk-based workers and shared workspaces, offering a highly responsive, cloud-powered experience. It's compact, lightweight, and designed to maximise productivity with its highly responsive performance. The device boasts impressive hardware features, including dual 4K monitor support, multiple USB ports, Wi-Fi 6E, and Bluetooth 5.3. Its local processing capabilities also ensure smooth video playback and high-quality video calls. <https://bit.ly/4i9c7af>

Apple likely to launch new AirTag next year

It's been two years since Apple first launched the AirTag and seems like we might be up for an upgrade next year. Even though there is little to change or improve with the tiny location tracker, Bloomberg reports that Apple can drop a new model as early as next year with some minor upgrades. As per the report, the new AirTag can be launched as early as mid-2025.

The new model is codenamed B589 and it's "progressed in manufacturing tests." This clears that the launch of AirTag might not be that far. The three major improvements expected in the new AirTag are –

- Better range
- Improved wireless chip
- Improved privacy

Out of these three, the first two are on the expected lines. <https://bit.ly/4fQBZq4>
