Apple plans to revolutionise Siri with Conversational AI by 2026

It seems like Apple's AI obsession has just begun.

Apple is reportedly working on introducing a more advanced version of Siri. With this, Apple's AI assistant will compete with AI tools like OpenAI's ChatGPT and Google's Gemini, according to Bloomberg's Mark Gurman. He further shared in his report that internally this new version of Siri is being called LLM Siri. It will be able to leverage large language models (LLMs) to enable conversational interactions and handle complex tasks more efficiently. This Siri will be more powerful than the one coming now with Apple Intelligence. It can debut as early as 2026. It will have capabilities such as text writing, summarisation, and improved third-party app interactions. <https://bit.ly/3ZqiPI2>

How 'Timeout Error' allowed robbers to steal Rs 2.52 lakh from SBI ATM

ATM transactions are something we all rely on for quick and easy cash withdrawals. But what if this convenience is turned into a tool for fraud? In a shocking incident from Thiruvananthapuram, two unidentified men managed to steal Rs 2.52 lakh from an SBI ATM without even deducting money from any customer's account. Keep reading to know how

they pulled off this clever scam and how it was uncovered. Between June 2022 and July 2023, the suspects targeted an SBI ATM on Padmavilasam Road in Fort. They used multiple stolen or lost ATM cards to withdraw money repeatedly. After withdrawing cash, they used to left one note behind in the machine's cash delivery compartment, reports TOI. This small but calculated act triggered the ATM to register the transaction as incomplete, leading to a "Timeout Error." Because the machine marked the transaction as incomplete, the money wasn't deducted from the account holders' balances. This trick ensured no complaints were raised by customers, and the fraud remained hidden for months. <https://bit.ly/3Z6djTi>

Google responds to DOJ's 'extreme proposal', warns of risks to consumer privacy

Google has hit back at the U.S. Department of Justice's (DOJ) proposal, calling it a "radical interventionist agenda." The DOJ's proposal is part of an ongoing lawsuit focused on how Google distributes its Search services, particularly its agreements with major partners. According to Google, the DOJ's sweeping suggestions go far beyond the scope of the case and could negatively impact a range of Google products.

WhatsApp introduces voice message transcriptions

Have you ever received a voice message but couldn't listen to it because you were in a noisy place or on the move? Or perhaps the message was so long that finding the right moment to play it became a challenge. WhatsApp has now made staying connected even easier by introducing voice message transcriptions.

Google might be forced to sell Chrome

Google's Chrome browser could be sold for as much as \$20 billion if a federal judge approves a Justice Department proposal to separate the browser from Alphabet Inc, Google's parent company. This potential move is part of an aggressive antitrust case against Google, accusing it of illegally dominating the search market. These recommendations will be presented to federal judge Amit Mehta. <https://bit.ly/410x8hj>
