Apple CEO Tim Cook uses 'life-changing' AI tool everyday

From work emails to personal messages, staying on top of everything can feel like a never-ending task. Even top business leaders aren't immune to the struggle. Apple CEO Tim Cook is one of them, and he's found an AI-powered solution that he says has transformed his daily routine. Cook typically starts his day around 4 am or 5 am. The first thing he does? Check his iPhone for emails and Apple's overnight sales reports. That's a big commitment, especially since he receives around 800 emails each day. But things changed with the arrival of Apple Intelligence, Apple's AI offering. There is an Apple Intelligence tool that provides short summaries of emails directly within the Mail app. Now, instead of going through each message in detail, Cook can glance through concise AI-generated summaries and decide what needs his attention. <https://bit.ly/3Oq65Va>

How AI is digitising scent for the first time

Through relentless advancements in tech over the decades, we've managed to capture and transmit images, sounds, and even tactile sensations across vast distances. Yet, one sense has stubbornly eluded our digital grasp: smell. Until now, that is, thanks to a startup called Osmo. I don't think many of you would've heard of Osmo, an enterprising startup doing pioneering work in "digital olfaction," and it recently announced a breakthrough that could redefine how we interact with the digital world. <https://bit.ly/4eKie20>

ANI sues OpenAI for copyright infringement

OpenAI, the creator of ChatGPT, has faced several lawsuits related to copyright infringement and misuse of copyrighted material in training its AI models. The latest is the lawsuit filed by the Indian news agency ANI, which alleges that OpenAI used its

copyrighted news content to train its AI models without permission. This marks the first instance of an Indian organization suing OpenAI or any AI company for copyright infringement. However, similar lawsuits have become increasingly common internationally. The implications for how AI and copyright law interact are significant and could shape the future of AI development. <https://bit.ly/4g4kwKo>
