

OPPO Find X8 Pro

Unleashes the photographer in you

OPPO's latest flagship, the OPPO Find X8 Pro, enters the premium smartphone market in India, giving Indian users a taste of OPPO's latest and greatest smartphone innovations. The company has leveraged its expertise in imaging, battery innovation, and build quality to create a device that aims to set benchmarks. From a groundbreaking quad-camera system with a dual periscope camera setup to a massive silicone-carbon battery and a sleek, durable design, the Find X8 Pro packs features that appeal to both tech enthusiasts and everyday users. While it offers plenty to admire, no device is without its flaws. So, let's see if the OPPO Find X8 Pro can manage to dethrone its Snapdragon 8 Elite counterparts, and if you should spend your hard-earned money on it.

BUILD AND DESIGN

The OPPO Find X8 Pro strikes a perfect balance between elegance and functionality. The quad-curved glass on both the front and back ensures a seamless ergonomic experience, making it comfortable to hold for extended periods. The curves blend into the aluminium frame, adding an aesthetic flair while maintaining a sturdy structure.

One of the most noticeable design changes compared to its predecessor is the camera module. OPPO has opted for a smaller, more compact camera island that minimises the wobble when the device is placed on flat surfaces.

Additionally, OPPO has introduced practical features like an alert slider and a Quick Button. The alert slider, reminiscent of the ones on old OnePlus devices, allows users to toggle between sound profiles quickly, while the Quick Button serves as a shortcut to the camera. However, this

rather blatant Apple rip-off lacks customisation options, making it feel somewhat limited compared to its Apple counterpart. Durability is another area where the Find X8 Pro shines. The front panel is protected by Gorilla Glass 7i, which ensures scratch resistance and added durability. That said, the optical fingerprint sensor is slightly slower than ultrasonic alternatives, a minor drawback in an otherwise robust build.

DISPLAY

The OPPO Find X8 Pro features a stunning 6.78-inch quad-curved LTPO AMOLED display with symmetrical slim bezels surrounding the screen, giving it a close-to-bezel-less appearance. With a peak brightness of 1568 nits as per our tests in High Brightness Mode, the display performs exceptionally well, even under direct sunlight.

OPPO's ProXDR technology enhances the viewing experience by boosting high-

lights and delivering a more vibrant image, making HDR content look immersive. The panel supports 2160 Hz PWM dimming, which reduces flickering and eye strain during prolonged usage. This makes the phone an excellent choice for binge-watchers or those who use their phones extensively at night.

However, the 1.5K resolution, while impressive, falls short of the 2K displays found in some competing flagship smartphones. While the difference is subtle and won't bother most users, those with a keen eye for detail might notice the slightly lower sharpness when reading text or inspecting intricate visuals. Nevertheless, the adaptive 120 Hz refresh rate ensures smooth scrolling and fluid animations, solidifying the Find X8 Pro's position as one of the best in the market for multimedia consumption.

CAMERAS

When it comes to cameras, the OPPO Find X8 Pro doesn't hold back. One of the standout features of the Find X8 Pro is its dual periscope telephoto lenses. This is a globally unique implementation, made possible by OPPO's advanced component-stacking technology. The 6x periscope lens, in particular, sets a new benchmark for smartphone photography. At extreme zoom levels, the phone's AI algorithms work wonders, preserving clarity and detail even at 30x zoom. And while many smartphones start to falter at higher zoom levels, the Find X8 Pro remains impressive all the way up to its maximum 120x zoom.

Portrait photography is another area where the Find X8 Pro shines, thanks to its collaboration with Hasselblad. The partnership brings a level of refinement to the camera system, delivering portraits with excellent dynamic range and vibrant yet natural colour reproduction. Highlights and shadows are balanced beautifully, and skin tones look lifelike. However, there's a slight drawback when it comes to edge detection. While the phone generally excels at separating subjects from backgrounds, it can sometimes struggle with complex edges, resulting in minor inconsistencies.
