Apple's first foldable iPhone may debut in September 2026

Apple has reportedly been working on its first foldable iPhone for quite some time. The design, innovation, and other aspects

have already been highlighted, and it is expected to pose a significant challenge to companies such as Samsung and Motorola. In the most recent update, the launch date of the foldable iPhone was tipped again. According to a source, Apple could release its first foldable phone in September 2026, alongside the iPhone 18 series. The tipster also stated that the company will use advanced displays provided by Samsung Display. <https://bit.ly/409mAu7>

■ CAMERA PHONE

Xiaomi 15 Ultra to launch in February

Xiaomi can soon unveil its flagship, the Xiaomi 15 Ultra soon. The smartphone is expected to drop in China by the end of February 2025. If rumours are to be believed, the Xiaomi 15 Ultra can officially drop on February 28. The smartphone is expected to go heavy on both cameras and performance. We can get to see some new features and significant upgrades in other places.

Thanks to the rumours and leaks, a lot about the Xiaomi 15 Ultra is already known. It is expected to feature the Snapdragon 8 Elite chipset and a quad-camera system. Reports from tipsters like Digital Chat Station and Smart Pikachu suggest that it can carry a 1-inch 50-megapixel primary sensor, a 50-megapixel ultra-wide lens, a 50-megapixel telephoto lens with 3x optical zoom, and a 200-megapixel telephoto sensor capable of 4.3x optical zoom. So this time we can get to see enhanced macro capabilities, a large aperture for better light capture, and improved low-light performance are also expected. <http://bit.ly/4gKEYR3>

Researchers introduce Iron Man inspired robot which will help in helps paraplegics walk

Researchers at the Korea Advanced Institute of Science and Technology (KAIST) have unveiled a lightweight wearable robot that enables paraplegics to walk, navigate obstacles, and even climb stairs. The WalkON Suit F1 exoskeleton promises to improve the mobility of people with spinal cord injuries, making their daily lives easier. <https://bit.ly/40895Le>

Apple's next AirPods Pro might feature heart-rate monitoring

Apple is gearing up for a series of exciting updates to its AirPods lineup, with a focus on health tracking features. The company is working on adding heart-rate monitoring to its next-generation AirPods Pro, marking a significant step forward in its push to make the device a health companion. Currently in early development, the heart-rate monitoring feature aims to provide an alternative to the Apple Watch. <https://bit.ly/407xZe8>
