

Mid-Range Phone

Value-for-money beasts

The mid-range smartphone segment in India, spanning ₹20,000 to ₹35,000, has evolved into a highly competitive arena, challenging the dominance of premium and high-end devices. Brands like Motorola and Nothing are redefining what it means to be “mid-range,” with Motorola pairing refined hardware with a near-stock Android experience and Nothing delivering meticulously crafted designs and polished software. Meanwhile, POCO, Vivo, and iQOO are setting benchmarks in raw performance, offering unparalleled speed in this price bracket. This segment is no longer about affordability alone. Let’s see which phone proves to be the performance beast in this segment, winning our Digit Zero1 Award.

Winner: Realme GT 6T

The Realme GT 6T has redefined what it means to be a mid-range powerhouse, marking the triumphant comeback of Realme’s GT series in India in 2024. Taking the market by storm, the GT 6T stands out for its jaw-dropping raw performance, powered by the Snapdragon 7+ Gen 3 processor. This chipset, a marvel in its category, crushes benchmarks while delivering seamless everyday performance, whether it’s gaming, multitasking, or running demanding applications. Gamers will particularly love the GT 6T, as it’s equipped with flagship-grade LPDDR5X RAM and UFS 4.0 storage – a rarity in this price bracket. These components not only ensure lightning-fast app opening speeds and data transfers but also guarantee stutter-free gameplay, even in resource-intensive titles like Genshin Impact. The GT 6T dethrones performance-centric stalwarts like iQOO and POCO, setting a new benchmark in the mid-range category. Its impeccable combination of raw power,

cutting-edge memory tech, and smooth user experience earns it the crown as the best-performing mid-range phone of 2024.

Runner-Up: Vivo T3 Ultra

The Vivo T3 Ultra is a solid contender in the mid-range segment, delivering blazing-fast performance with the Dimensity 9200+ processor, the same powerhouse found in the pricier Vivo V40 Pro, which secured the Digit Zero1 Award in the High-End Phone category. For most users, this phone offers a lightning-fast experience, excelling in multitasking, gaming, and everyday use. However, the T3 Ultra narrowly misses the top spot for performance in 2024, falling short of the Realme GT 6T in storage read and write speeds. This minor setback impacts app opening and data transfer speeds, giving the GT 6T an edge. Additionally, its display isn’t as bright as the GT 6T’s, which might be noticeable under harsh lighting conditions. Despite these trade-offs, the T3 Ultra is still an exceptional package. It’s a delight for performance enthusiasts and even impresses camera lovers with its very good primary lens, making it a well-rounded device.

Best Buy: POCO F6

The POCO F6 launched at ₹29,999 and is now priced at a mind-boggling ₹24,999, despite having one of the most powerful chipsets you can find at this price – the Qualcomm Snapdragon 8s Gen 3. At its price, the performance you can squeeze out of this phone is nothing short of extraordinary. Be it benchmarks like AnTuTu and GeekBench or real-world gaming in demanding applications like Genshin Impact, simply nothing comes close to what the POCO F6 can deliver. The POCO F6 is what we can confidently call “bang for your buck”. If we had a sub-₹30,000 category, the POCO F6 would have claimed the Digit Zero1 Award with ease, but since we have ₹35,000 phones on the list, it instead rightfully wins the Digit Best Buy Award.
