

Battery Smartphone

Endurance above all

In 2024, smartphone batteries have reached new heights, catering to users demanding longevity and fast charging. Battery technology trends in 2024 hint at a pivotal transition. Lithium-ion remains dominant, but advancements, like optimised anode designs and energy-dense chemistries, are bridging the gap to the next leap: silicon-carbon batteries. While a few high-end models experiment with them today, their broader adoption will redefine endurance standards. As we edge closer to 2025, the future looks promising for consumers seeking exceptional battery performance tailored for the ever-evolving smartphone ecosystem. Let's see which phone led the pack in 2024.

Winner: Apple iPhone 16 Pro Max

The iPhone 16 Pro Max delivers unmatched battery life in 2024, despite having a smaller 4,685mAh battery compared to some flagship competitors. The efficient A18 Pro chipset ensures minimal energy consumption while delivering exceptional performance. Combined with iOS 18's refined power management algorithms, the device delivers 7-8 hours of screen-on time with ease, excelling in tasks like web browsing and call performance. Even with resource-intensive tasks like gaming or video playback, the iPhone 16 Pro Max manages power judiciously, keeping battery drain in check. This balance ensures that users experience all-day battery life. Apple's holistic approach to energy efficiency, integrating cutting-edge hardware and meticulously designed software, cements the iPhone 16 Pro Max as the ultimate smartphone for battery endurance.

Price: ₹1,44,900

Runner-Up: OnePlus 12R

The OnePlus 12R cements its place as a battery life champ in 2024, delivering endurance that few can match at its price point. With a robust 5,500mAh battery, the 12R elevates itself beyond incremental upgrades, offering a transformative experience for power users and casual consumers alike. In real-world scenarios, the phone consistently delivers an impressive 6-7 hours of screen-on time, comfortably handling daily essentials like streaming, browsing, and moderate gaming. However, its prowess truly shines in rigorous testing. In our 4K video loop test, where a video plays continuously until the battery hits zero, the 12R lasted over 16 hours; a result that speaks volumes about its efficiency-focused hardware and software optimisation. What sets the 12R apart is its seamless balance between performance and endurance. It handles multitasking and demanding apps without skipping a beat, all while sipping power judiciously. For users seeking a phone that doesn't just last but thrives under pressure, the OnePlus 12R is a compelling choice.

Price: ₹39,999

Best Buy: Motorola G64

At just ₹14,999, the Motorola G64 is a standout choice for budget-conscious users prioritizing battery life. Packed with a massive 6,000mAh cell, it easily delivers two days of battery life, even with heavy usage which is a rare feat in its price range. Powered by the efficient Dimensity 7025 chipset, the G64 outlasts its predecessor, the Moto G54, showcasing improved endurance. In our 4K video loop test, the phone ran an impressive 19 hours, cementing its position as a battery powerhouse. While it drains faster during gaming compared to the winner and runner-up in this category, the G64 remains unbeatable for everyday longevity, making it exceptional value for money. It deserves to bag the Digit Best Buy Award in this category.
