

AI Smartphone

AI-powered brilliance

In 2024, AI smartphones are reshaping the tech landscape with features that are more intuitive, powerful, and integrated than ever before. This year, we tested a wide range of AI-powered smartphones, spanning from budget-friendly models to ultra-premium flagships. Entry-level devices impressed us with practical AI tools. Meanwhile, premium phones brought groundbreaking innovations, including live AI Translate for instant communication and artistic tools that transform sketches into lifelike images. These advancements highlight the incredible potential of AI in enhancing both productivity and creativity. The winner of our Digit Zero1 Award delivered cutting-edge AI capabilities, setting a benchmark for innovation and versatility. On the other hand, the Best Buy Award celebrated a device that offered compelling AI features without the premium price tag, making advanced tech accessible to a broader audience and proving that AI is for everyone.

Winner: Samsung Galaxy S24 Ultra

The Samsung Galaxy S24 Ultra isn't just a smartphone—it's the gold standard for AI in 2024. This phone takes everyday tasks and makes them feel effortless, thanks to its incredibly seamless AI integration. Need real-time translations while travelling? The Live AI Translate feature works like magic, adapting contextually as you speak. Or how about turning a quick doodle into a stunning image? The Sketch to Image feature handles that with ease, unlocking creative possibilities like never before. But what really solidifies the S24 Ultra's crown is its performance in our Digit AI-Q test, where it scored a jaw-dropping 90/100. This isn't just a number; it's a testament to the raw power of its Neural Processing Unit (NPU). From crushing machine learning benchmarks to

OnePlus Nord 4
Price: ₹29,999

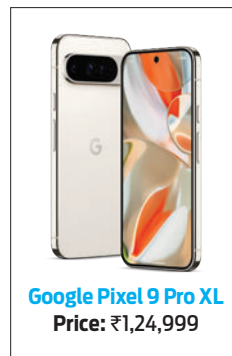

Samsung Galaxy S24 Ultra
Price: ₹1,29,999

excelling in AI-driven photo enhancements, this phone didn't just top the charts, it set a new bar.

Runner-Up: Google Pixel 9 Pro XL

The Google Pixel 9 Pro XL builds on last year's model in all the right ways, delivering a device that's smarter, more polished, and packed with meaningful AI upgrades. However, while the Pixel 9 Pro XL has made huge strides, it just falls short of matching the raw power of the Samsung Galaxy S24 Ultra's NPU. The benchmarks don't lie; Samsung holds the edge in sheer processing muscle. But what Google offers here is arguably more relevant to day-to-day life. With its thoughtful AI features that are both accessible and impactful, the Pixel 9 Pro XL is a standout contender for anyone prioritising practical innovation.

Price: ₹1,24,999

Best Buy: OnePlus Nord 4

The OnePlus Nord 4 has redefined the mid-range smartphone market in 2024, offering exceptional value without compromising on advanced AI capabilities. It democratises access to features typically reserved for premium devices. One of its standout AI tools is AI Eraser 2.0, which allows users to effortlessly remove unwanted objects from photos, enhancing image quality with a simple tap. Additionally, the AI Toolkit introduces features like AI Speak, a text-to-speech function that reads aloud web pages and documents, and AI Summary, which condenses lengthy articles into concise summaries; perfect for on-the-go information consumption. By integrating these advanced AI features into an affordable package, OnePlus has made sophisticated technology accessible to a wider audience, solidifying the Nord 4's position as the best value-for-money AI smartphone of the year.
