

So, the thin-and-light laptop space has absolutely blown up in the last few years, mainly because people want portable machines that still pack serious power. And guess who finally hopped on the bandwagon this year? Qualcomm, after a low-key partnership with Microsoft, and the results caught everyone off guard. Over here in India, we're seeing the same trend. On the tech side, there have been major breakthroughs that let these machines stay ultra-slim without skimping on features. That's exactly why we have the "Thin and Light Laptops" category, to shine a spotlight on the innovations happening here and to recognize the devices pushing limits in design and performance.

Winner: ASUS Zenbook S14 OLED 2024

The ASUS Zenbook S14 OLED (2024) combines a sleek, premium design with outstanding performance. It rightfully clinches the Zero1 Award for Thin and Light Laptop in 2024, mainly thanks to its excellent battery life and impressive CPU performance. Beyond handling everyday tasks like web browsing, document editing, and coding, the robust iGPU also supports casual gaming and graphics-intensive workloads. Even better, performance remains nearly identical whether you're plugged in or relying on battery power. The vibrant OLED display delivers sharp colors and deep blacks, complemented by a comfortable keyboard that supports long typing sessions. Fast RAM and ample I/O options, including Thunderbolt 4, make it versatile for creative projects and content consumption

alike. This winning combination of power, design, and endurance stands out among thin and light contenders in 2024.

Runner-Up: HP EliteBook Ultra G1q

The HP EliteBook Ultra G1q was another impressive laptop this generation. Quite frankly, Windows laptops matched MacBooks in battery life in 2024 largely due to devices like the EliteBook Ultra, which featured Qualcomm's new Snapdragon X Elite SoC—completely changing the game. As a result, the HP EliteBook Ultra G1q delivers superb battery life—among the highest in our tests. However, its weaker iGPU performance on the ARM platform and lingering app compatibility issues remain concerns. Consequently, it earns the runner-up spot in the Zero1 Awards 2024.

Price: ₹1,68,999

Best Buy: Infinix INBook AirPro+

So here's a laptop that totally redefines "value for money." Just look at what you're getting: an ultra-thin profile, a weight of only 1.24 kg, and a dazzling 2.8K OLED display with 100% sRGB and a 120Hz refresh rate. On top of that, you've got Intel's 13th Gen Core i5-1334U under the hood, 16GB of RAM, and plenty more. Honestly, you'd be hard-pressed to find a thin-and-light laptop offering such an insane bang for your buck. No wonder the Infinix INBook Air Pro+ snagged the Digit Best Buy 2024 award! One of its biggest perks is how smoothly it handles everyday tasks, from spreadsheets to moderate photo editing. The battery life keeps you unplugged for a good while, and that OLED screen delivers vibrant colors and deep blacks. Plus, the sleek build quality screams "premium," and its portability makes it a breeze to take anywhere. The only catch? The 512GB storage isn't upgradeable, which is a slight bummer given the otherwise stellar value. But beyond that minor hiccup, this laptop is about as good a deal as it gets for anyone who wants a fantastic thin-and-light experience without breaking the bank.
