

While truly wireless earbuds have cemented their spot in the audio world, over-ear and on-ear wireless headphones remain irreplaceable for those who crave a more immersive listening experience. In 2024, the wireless headphone market didn't quite redefine itself, but it quietly refined the essentials. Companion apps also took a leap forward, offering better EQ customization, adaptive sound tuning, and personalized noise cancellation profiles powered by AI. The buzzwords may sound fancy, but the result is straightforward - a more tailored audio experience that feels intuitive. Curious to see which headphones defined the standards in 2024? Let's dive in.

Winner: Sonos Ace

The Sonos Ace headphones have earned the Digit Zero1 Award for 2024, and for good reason. These cans manage to hit that sweet spot between precision and warmth, delivering a sound signature that's as versatile as it is refined. Powered by custom-designed 40 mm dynamic drivers, the Ace takes a balanced approach – enough bass to keep things exciting but without drowning out the mids and highs. The Ace leans toward a warmer profile. Vocals are crystal clear, and the mids are rich with detail, perfect for everything from Adele to Beethoven. The highs have just the right amount of sparkle, adding life to instruments like cymbals and violins. The soundstage isn't massive but feels

Accentum Plus**
Price: ₹15,999

spacious enough to keep things immersive, and the instrument separation is spot-on, making it easy to pick apart layers in complex tracks. What really sets the Sonos Ace apart is its consistency. Whether you're using Bluetooth, analogue, or USB, the sound quality stays impressively steady—no weird dips or distortions here. Turn off ANC, and you'll notice a slight bass boost that adds a bit of thump without going overboard, making it great for more bass-driven genres. Call quality is another area where the Ace shines. With eight beam-forming microphones, it keeps your voice clear even in noisy environments. It is absolute best in this department, it's definitely in the top tier, giving Sony and Sennheiser, this year, a run for their money.

Runner-Up and Best Buy: Sennheiser Accentum Plus

Earning the Digit Best Buy Award 2024, the Sennheiser Accentum Plus Wireless Headphones are a masterclass in blending killer sound, practical features, and solid battery life – all while staying wallet-friendly. Let's talk sound first, because that's what really matters, right? Out of the box, you're getting bass that's punchy but not overwhelming, and highs that sparkle without being sharp. The mids hold their own too, giving vocals and instruments a nice presence. If you're a tinkerer, the Sennheiser Smart Control app lets you fine-tune the EQ to your heart's content. Bass-heads can crank it up, purists can go for a flat profile – it's all there. The Adaptive Hybrid ANC deserves a shoutout too. It's not going to dethrone the flagship ANC kings, but for the price, it's surprisingly effective. Pair that with the impressive passive isolation, and you've got yourself a pretty immersive experience. Battery life? A beast. These things ran for 45 hours straight in our tests with ANC on and volume at 50%. Plus, fast charging gives you three hours of juice in just 10 minutes. For long commutes or travel days, this is a game-changer. Throw in a lightweight design, durable build, support for high-res audio codecs, and a super customizable app, and you've got a pair of headphones that feel like they should cost way more.
