

CES 2025's gaming accessories

CES 2025 has, time and again, been the ultimate playground for tech heads, where innovation takes centre stage and gaming tech continues to push boundaries. This year's lineup didn't just showcase faster hardware or shinier gadgets – it introduced thoughtful designs, clever AI integration, and personalised solutions to level up your gaming experience. Here are some standout announcements from CES 2025 that could reshape your setup and how you game.

Autokeybo

Think about how satisfying it feels

heavier for precise movement in FPS games? This keyboard's modular design has you covered. Pair it with its AI companion app, which learns your gaming habits and suggests optimal layouts, and you've got a device that feels like it's been custom-built for your playstyle. Throw in a sleek RGB lighting setup, and the Autokeybo doesn't just perform – it's a visual centrepiece for any gaming rig. For gamers chasing both functionality and flair, this one's a winner.

Razer Project Ariellee

Let's face it – a sweaty back mid-game isn't ideal, and neither is freezing in your chair during a late-night grind.

adjustable lumbar system that's perfect for long gaming marathons. The chair's futuristic design – complete with subtle RGB lighting – adds another layer of immersion to your setup. While it's still in prototype mode, the concept shows just how far companies like Razer are willing to go to make gaming a truly all-encompassing experience.

Corsair Custom Lab

Gaming hardware is personal, and Corsair's Custom Lab makes it more personal than ever. This new initiative lets you design peripherals and components that not only perform but also reflect your unique style. Want a keyboard with metallic finishes and custom keycaps? Or maybe a mouse tuned specifically for your MMORPG macros? Custom Lab makes it happen.

On top of offering fully customisable keyboards and mice, Corsair has expanded its hardware portfolio with sleek new cases, modular PSUs, and even RAM modules featuring interchangeable heatsinks. This means your rig can look as good as it performs, with every component tailored to your exact needs.

For gamers who see their setups as an extension of their personality, Corsair's approach is a breath of fresh air. It's not just about picking colours; it's about creating hardware that feels like it's yours in every way.

Keychron Q6 Lemokey

Keychron has been a favourite among keyboard enthusiasts for years, but the Q6 Lemokey P1 takes things to a whole new level. At its core is Hall Effect technology – a switch mechanism that uses magnetic fields to detect keypresses. Why does that matter? Because it offers near-instant response times and a lifespan that makes regular mechanical switches look like disposable toys.

to click the perfect key switch. Now, imagine a keyboard that lets you control exactly how that click feels – and looks like it's straight out of a sci-fi movie. Enter the Autokeybo, a keyboard that doesn't just rely on switches but physically raises and retracts keys like tiny mechanical marvels.

Designed for both gaming and typing, the Autokeybo lets you fine-tune key resistance, travel distance, and actuation force. Need lighter presses for high-speed MOBA actions? Or something

Enter Razer's Project Arielle, a prototype gaming chair that takes comfort to the next level with built-in heating and cooling systems. Think of it as the luxury car seat of gaming.

Project Arielle lets you adjust temperatures on the fly, keeping you cool during those clutch moments in Valorant or cosy while exploring snowy tundras in God of War: Ragnarok. Beyond temperature control, it's designed for serious comfort, with memory foam cushions and a fully
