

Best of fitness tech at CES 2025

CES 2025 wasn't just about foldable screens or autonomous cars – it was also a playground for fitness tech that's taking workouts and recovery to the next level. Whether you're an athlete, a casual gym-goer, or someone just trying to stay active, the gadgets this year had something for everyone. From AI-backed coaching tools to recovery solutions that feel like they're straight out of a sci-fi movie, here's a rundown of the coolest fitness tech we saw.

Beyond 01

Smartwatches are everywhere, but Beyond 01 feels like it's playing in a league of its own. Sure, it tracks the usual – heart rate, sleep, blood oxygen – but the real kicker is its AI-powered fitness insights. This thing doesn't just count steps; it analyses your activity trends and gives you workout plans that actually make sense for you. Its sleek, minimalist

design means you can rock it at the gym or a dinner party, and it's tough enough to handle hikes and sweaty cardio sessions. Plus, it connects with pretty much every fitness app out there, so you're not stuck switching platforms.

Core 2 Thermal Sensor

Ever wonder if your workout is pushing you too hard – or not hard enough? The Core 2 Thermal Sensor has you covered. It's tiny, but this little gadget measures your core body temperature with pinpoint accuracy. Not just surface-level stuff; it digs deeper to give you real-time updates that can help you adjust your intensity mid-session.

Hook it up to your smartwatch or fitness tracker, and it'll nudge you when it's time to cool down or pick up the pace. Athletes are already buzzing about its potential to fine-tune performance, but even casual users can benefit from keeping tabs on their internal heat levels.

G-Grip

Golf is all about precision, and the G-Grip AI-powered golf club is here to help you nail it. Packed with sensors and machine learning smarts, this club doesn't just track your swing – it breaks it down to the tiniest detail. Speed, angle, grip pressure – you get instant feedback that's easy to understand, even if you're new to the game.

The companion app takes it a step further, showing you how to tweak your technique with video overlays and data insights. Whether you're trying to shave a few strokes off your score or just avoid embarrassing slices, this club's got your back.

HomePlunge

Cold plunges aren't just for pro athletes anymore. The HomePlunge brings recovery-focused cold water immersion therapy to anyone with space for a small tub. It's compact, portable, and has temperature controls precise enough to give you the perfect post-workout chill session. The companion app offers guided sessions tailored to how intense your workout was, so even if you're new to cold therapy, you're not left shivering aimlessly. Whether it's for reducing soreness or just waking yourself up, this tub makes recovery something you'll actually look forward to.
