

# DeliverIt: How this crucial app is secretly powering Indian restaurants

Interview with **Sidhantt Suri**, CEO, Urban Harvest & DeliverIt

**Q From a sales executive to the CEO of Urban Harvest & DeliverIt, how has your journey evolved?**

**A** I've always been passionate about solving real-world problems, and my journey has been about identifying gaps in industries and addressing them with the right solutions. I started my career with sales, working closely with traders in the fruit market, but I always wanted to build something of my own. Urban Harvest was born out of a need to bring efficiency and reliability to the fresh produce supply chain, while DeliverIt emerged as a solution for HoReCa businesses that struggle with timely ingredient procurement. Both ventures are about efficiency, quality, and speed, and leading them has been both challenging and exciting.

**Q DeliverIt is positioned as an on-demand delivery service for HoReCa. How is it different from other delivery platforms?**

**A** The biggest challenge for restaurants and cloud kitchens isn't just getting ingredients—it's getting the right ingredients at the right time, without disruption. That's where DeliverIt stands apart. We're not just a logistics company; we're an end-to-end solution for HoReCa procurement. We integrate smart inventory management, real-time demand tracking, and predictive logistics to make sure kitchens never run out of essential supplies. The goal is simple: reduce delays, optimize costs, and ensure quality so that businesses can focus on serving their customers.

**Q Urban Harvest is changing how fresh produce is sourced and distrib-**

CEO, Urban Harvest & DeliverIt

**uted. What are the biggest challenges in this space?**

**A** Fresh produce is a tricky business. Unlike packaged goods, it's highly perishable, pricing fluctuates, and sourcing consistency is always a challenge. One of our biggest hurdles has been ensuring quality control at scale while maintaining affordability. We've tackled this by building direct relationships with farmers, using data-driven demand forecasting, and optimizing our cold chain logistics. The result? Fresher produce, reduced waste, and better margins for both suppliers and buyers.

**Q The rise of Q-commerce is redefining supply chains. How do you see this trend evolving?**

**A** Q-commerce is a game-changer. Consumer expectations have shifted—whether it's food, groceries, or essentials, everything needs to be fast, reliable, and seamless. The same expectation is now trickling into the

B2B space, where restaurants and businesses want just-in-time inventory without stocking up unnecessarily. At DeliverIt, we're leaning into this trend with smart logistics, route optimization, and real-time stock tracking, making it possible for restaurants to order exactly what they need, exactly when they need it. In the long run, this is going to redefine how supply chains operate—leaner, more responsive, and highly automated.

**Q Where do you see Urban Harvest and DeliverIt in the next few years?**

**A** For Urban Harvest, the vision is to become India's most trusted fresh produce supplier, leveraging technology to make the supply chain more efficient, transparent, and profitable for everyone involved—from farmers to restaurants.

For DeliverIt, the goal is to dominate the HoReCa procurement space, ensuring that no restaurant or cloud kitchen ever has to worry about ingredient shortages or delivery delays again. We're scaling aggressively, investing in logistics tech, and expanding our footprint to cover every major food hub in India.

**Q What's your advice for entrepreneurs looking to disrupt traditional industries?**

**A** Solve a real problem, not a theoretical one. A lot of businesses fail because they chase trends instead of identifying actual pain points. Listen to your customers, adapt quickly, and stay focused on execution. Ideas are everywhere, but success comes down to how well you execute them. Also, surround yourself with smart people who challenge you, because the right team makes all the difference. ■
