

Mivi SuperPods Opera ANC

A budget option worth considering

Budget earbuds usually come with a list of compromises, but Mivi seems determined to challenge that narrative with the SuperPods Opera ANC. At just ₹1,799 (at the time of writing), these earbuds promise high-end features like active noise cancellation (ANC), LDAC support, and a battery life that punches way above their weight. Let's find out if they're as good as they sound on paper.

BUILD AND DESIGN

First impressions? The SuperPods Opera ANC looks slick. The two-tone finish – matte earbuds and glossy stems – gives them a premium vibe. The pebble-shaped charging case matches the earbuds' style, but the glossy lid can be a fingerprint magnet. If you're the kind of person who likes their gadgets looking spotless, this might bother you. Comfort-wise, Mivi nails it. The earbuds fit snugly, and with the silicone ear tips included in various sizes, it's easy to find the right fit. This isn't just about comfort – it also helps with passive noise isolation, which boosts the ANC's effectiveness. You can wear these for hours without feeling like your ears are being squeezed.

With an IPX4 rating, these earbuds can handle sweat and light splashes, making them a good choice for workouts or commutes in light rain. The build quality feels solid, but the glossy finish on the case is prone to scratches. It's a small gripe, but one that could've been avoided with a matte finish.

FEATURES

With Bluetooth 5.2, the SuperPods

Opera ANC offers a stable connection with minimal latency. Multipoint connectivity is a nice touch, letting you switch seamlessly between two devices – great for bouncing between your phone and laptop.

The touch controls are responsive but a bit sensitive. Accidental taps happen, which can be annoying. Luckily, you can tweak the controls using the Mivi Audio app, which also offers EQ presets for personalising your sound. The app isn't super polished – it's functional but not fancy – but it gets the job done.

PERFORMANCE

If you like bass-heavy sound, you'll enjoy these earbuds. They're clearly tuned for thumpy tracks like "Uptown Funk". The mids – vocals and instruments – stay clear enough to keep things enjoyable, but don't expect

a super-detailed soundstage. The treble, unfortunately, feels a bit shy, which means you might miss some of the sparkle in tracks with a lot of high-frequency action. On the bright side, there's LDAC support for high-resolution audio. With compatible devices and good source files, you can pick up more detail than you'd expect from earbuds at this price. Just don't expect miracles – the hardware isn't audiophile-grade, but it's solid for casual listening. Mivi claims the SuperPods Opera ANC can reduce noise by up to 35dB. Real-world results? They do a solid job with low-frequency hums, like fans or aeroplane engines. But higher-pitched sounds – think keyboard clicks or people chatting – still sneak through. This isn't unique to Mivi, especially at this price, but it's worth knowing if you're expecting dead silence. The transparency mode works well enough. It lets you hear your surroundings without taking the earbuds out, which is handy when you're crossing streets or ordering coffee. The sound comes through a bit robotic, but it's functional.

Let's be real: earbuds at this price aren't going to deliver studio-grade call quality. That said, the SuperPods Opera ANC holds up pretty well for casual calls. The microphones pick up your voice clearly in quiet settings, but they struggle in noisy environments. Background noise management is hit-or-miss, so don't count on these for important calls in busy cafes.

BATTERY LIFE

Battery life is where these earbuds really shine. You get about 8 hours of playback on the earbuds alone, and the case bumps that up to an insane 60 hours. If you're using ANC or LDAC, those numbers drop a bit – expect closer to 6 and 50 hours, respectively – but that's still plenty.

And if you're in a rush, the fast charging is a lifesaver. Ten minutes of charging gives you about 500 minutes of playback. That's more than
