

excellent and the Bravia 9 could consistently respond to our voice prompts.

The software is based on Google TV and is perhaps the best version of Google TV that we have experienced. Sony has invested considerable effort in offering a wide range of customization options on the Bravia 7, with default settings optimized to provide the best experience for everyday users who may prefer not to risk toggling the wrong options. So, both casual viewers and tech enthusiasts can enjoy a tailored experience, with the flexibility to tweak further if desired.

There are several preloaded Sony apps, which are well-designed. The Sony Bravia Core app is now available in India and offers a vast selection of titles from Sony Pictures, including some with IMAX Enhanced with 80Mbps Pure Stream. Bravia 9 users will get 10 free credits to add content to their library and stream in high quality for 24 months. Additionally, you can register your Bravia TV to enjoy a three-month free subscription to Sony Liv.

GAMING AND AUDIO

We tested the gaming prowess of the Sony Bravia 9 with Sony PS5 and games like Ghost of Tsushima, Witcher 3 and Spiderman 2. The TV has a low-latency game mode and supports HDMI 2.1 gaming features and connectivity via two of the four HDMI ports. The gameplay was perfectly smooth and HDR impact in bright sequences is once again amazing. The audio on the Bravia 9 is hands down

the best that I have experienced on a TV yet. Thanks to Acoustic Multi Audio+, the sound seems to emanate directly from the TV screen. The dialogues are clear and the soundstage is wide. Even the Dolby Atmos from native speakers is impactful, which is something we rarely get to say.

DESIGN AND BUILD

This is of course an extremely premium-looking TV with Sony's signature checkerboard pattern on the back. What I didn't expect, however, is just how heavy it is! (42.3 Kg without stand) The bezels on the sides are quite narrow and the Sony branding on the right is barely visible. The tabletop stand has to be purchased separately for Rs. 2500 and you may also opt for wall-mount installation for Rs. 1000. The metallic stand looks premium and you get the option to adjust the height and width.

The remote design hasn't changed—it's still made from recycled "sorplas" plastic, and the backlit keys make it super handy in low light. This is a very comfortable remote in practical life but is also prone to scratches.

Also, you can recharge it with a USB Type-C port, and don't worry this won't be yet another gadget that you'd need to bother charging frequently - The battery life is amazing and I haven't managed to drain it even after three weeks of use! At the same time, you may eventually need to get the battery replaced somewhere down the road.

VERDICT

To sum it up, yes the Bravia 9 is an excellent mini LED TV. As Sony demonstrated at the launch event, this TV performs really close to the BVM X3110 mastering monitor in professional mode. The colours are accurate, the whites and panel uniformity are amazing, and the TV handles blacks with expertise. When placed next to Bravia 8, the advantages of pixel-level control and higher contrast on OLEDs were quite clear, and not just in dark sequences. The effect is clearer facial details and higher contrast.

However, more often than not, you will be watching your TV in a bright well-lit room and in such settings, Bravia 9 can make everything else look dull. And unlike OLEDs, it can sustain high brightness in extended sequences, such as sports matches, without dimming the panel. And if you are not very particular about colour accuracy and prefer to enjoy content in boosted modes like Vivid and Standard, which most people do, the scales further tilt in Bravia 9's favour.

So, if you have OLED inhibition - concerns like potential burn-in, lower peak brightness, or doubts about longevity, or if you looking for a TV that is extremely colour-accurate out of the box, the Bravia 9 is the one to go for.

—Deepak Singh

SPECIFICATIONS

Model: K-75XR90 | Display: 75-inch Mini LED backlight, XR Triluminous Pro (Quantum Dots), Local Dimming | Panel Type: VA LCD | Display Resolution: 3840 x 2160 - 4K UHD | Panel Refresh Rate: 120Hz | Supported HDR Formats: HDR10, HLG, Dolby Vision | Speakers: 70W, Acoustic Multi-Audio, Frame Tweeter, Beam Tweeter | Audio Formats: Dolby Atmos, Dolby Audio, DTS Digital Surround, DTS Express, DTS-HD Master Audio, DTS-HD High Resolution Audio, DTS:X | Software: Google TV with Sony customisations (Android TV 12) | Screen Mirroring: Chromecast built-in, Apple AirPlay | HDMI Ports: 4 HDMI ports (2 HDMI 2.1) | Processor: XR Processor | Storage: 32GB | Other Connectivity Options: 2x USB ports (500mA, 900mA), Dual-band Wi-Fi 6, Bluetooth 5.3, AV, RF, Ethernet, headphone.
