

drops, and with features like Frame rate interpolation and touch optimisation, the gaming experience on the 13R remains as immersive as ever.

OxygenOS 15 brings several meaningful improvements which include New AI tools for imaging such as Detail Boost, unblur and Reflection Eraser, and productivity tools including Intelligent Search using Gemini, and Magic Compose to help you proofread text. There's also a Share with iPhone feature for seamless file transfers between Android and iOS.

OnePlus has committed to 4 years of major Android updates and 6 years of security patches, putting the 13R on par with other mid-premium smartphones.

CAMERA

The triple camera setup is where OnePlus has made significant strides. The primary 50-megapixel camera uses a Sony LYT-700 sensor which is a massive upgrade from the IMX890 on the 12R. It is better at capturing light, and it shows in low-light photography. The 13R's camera system produces good-looking, colourful images without any hassle.

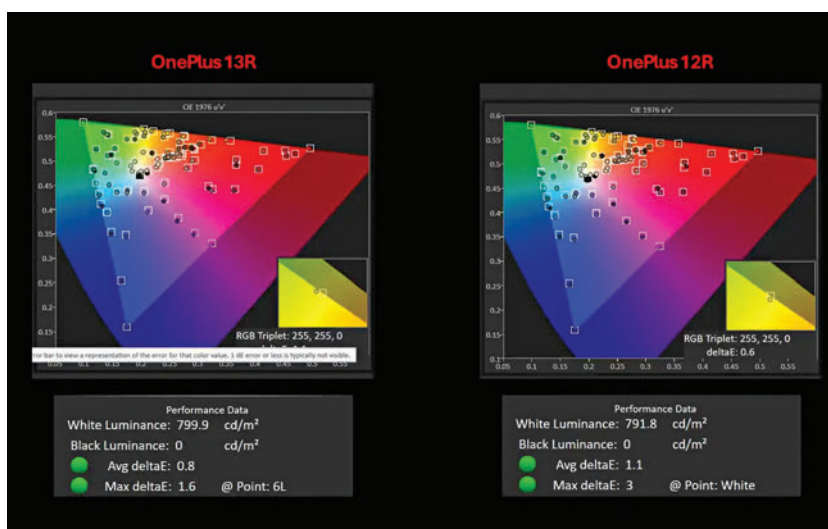

The OnePlus 13R gets the much-needed telephoto lens. It's a 50-megapixel Samsung ISOCELL JN5 sensor and is a great addition as it allows you to capture some really good-looking portraits at 2X optical zoom and I feel it's a much better use of space than putting a macro lens there like on the 12R.

The new Dual Exposure Algorithm is particularly impressive in action shots. It captures a short and a long exposure image every time so that you don't miss out on those quick shots.

The portrait mode has seen significant improvements, especially in edge detection. The 2x optical zoom might seem modest, but the quality is maintained up to 4x thanks to the new algorithms. There's an 8-megapixel ultrawide lens that has been carried forward from the 12R.

BATTERY LIFE

The 6,000mAh battery is only 500mAh more than the 12R, but it shows. My

daily use included over 2 hours of gaming, 3 hours of video streaming, constantly being active on social media platforms, multiple camera sessions and always on display enabled. Even with this heavy use, I consistently ended days with 30-35% battery remaining. In the PC Mark Battery Life test, the OnePlus 13R was able to go on for over 22 hours and 52 minutes before powering down and this is a very good result that's backed by a beefy battery which will last you 5-6 hours more than the 12R.

The charging speed of the 13R is solid, taking 50-52 minutes for a full charge with the 80W adapter.

ADDRESSING GREEN LINE ISSUE

Let's now address the elephant in the room – the green line issue that's affected previous OnePlus devices. OnePlus 13R has a new PVX Enhanced Edge Bonding layer which is specifically designed to prevent this problem. OnePlus is so confident in this solution that they're offering free display replacements if any green line issues occur, ever. More about it here.

VERDICT

The OnePlus 13R is a significant evolution in the R-series. It's no longer just a 'budget flagship' – it's a proper flagship in the mid-premium segment that

happens to be priced competitively. The improvements in display technology, battery life, and camera performance make it a compelling upgrade even for 12R users.

The OnePlus 13R is priced starting at ₹42,999 with 12GB RAM and 256GB storage and we also get a 16GB RAM variant with 512GB storage which is exclusive to India. In comparison with the 12R which started at ₹39,999, OnePlus hasn't technically increased the price of its R-series this year which is great to see.

Would I recommend it? Yes absolutely, especially if you're coming from a phone that's two or more years old. The value proposition here is simply unmatched in this price segment. But if you don't like the design of the 13R, stick around as prices of the 12R are expected to fall in the coming weeks.

–Siddharth Chauhan

SPECIFICATIONS

Processor: Snapdragon 8 Gen 3 | GPU: Adreno 750 | RAM: 16 GB LPDDR5X | Storage 512 GB UFS 4.0 | OS: Android 15, OxygenOS 15 | Display: 6.78" LTPO AMOLED, 1B colours, HDR10+/Vivid, Dolby Vision, 2780 x 1264 pixels | Refresh Rate: 120 Hz | IP Rating: IP65 | Cameras: 50 MP + 50 MP + 8 MP | Selfie Camera: 16 MP | Video: Up to 4K at 60 fps | Battery Capacity: 6,000 mAh Si/C | Charging: 80 W (wired)
