

Personalised Fitness Tracker

You don't need an expensive wearable to track your fitness. Your smartphone's accelerometer, gyroscope, and GPS can analyse your movements, count steps, and even estimate calories burned – all while keeping your data offline.

Think your phone can't keep up with your workouts? Let's prove it wrong:

1. Access your phone's built-in fitness tracking features (like Google Fit or Apple Health).
2. Turn off cloud syncing to ensure your data stays local.
3. Use GPS to track outdoor runs or hikes, and accelerometer data for step counting.
4. Set up activity-specific modes like cycling or walking for tailored tracking.
5. Review your stats daily and set personal goals – all without sharing a byte online!

Acoustic Room Tuning

Is your sound system underperforming? Your phone's microphone can analyse the acoustics of a room, helping you optimise speaker placement and adjust settings for better audio quality.

Want to tune your room like a pro? Here's how:

1. Place your phone in the listening position and open a sound-analysis app that works offline.
2. Play a test tone or pink noise through your speakers.
3. Use your phone's microphone to measure frequency responses and identify problem areas (e.g., echoes or dead spots).
4. Adjust speaker placement, angle, or equaliser settings to balance the sound.
5. Re-test until you're satisfied with the acoustics.

Advanced Macro Photography

Your phone's camera can capture stunning macro shots, revealing intricate details invisible to the naked eye. With the right settings and a bit of creativity, you can transform everyday objects into works of art.

Ready to zoom into the microscopic world? Here's how to start:

1. Switch to your phone's macro mode or use a clip-on macro lens for enhanced focus.
2. Find a well-lit subject (natural light works best) and stabilise your phone with a tripod or steady surface.
3. Tap to focus on the smallest details, ensuring sharpness.
4. Adjust exposure and white balance to highlight textures and colours.
5. Save your masterpiece and marvel at the intricate world around you!
