

field of view, ensuring that group selfies capture everyone. The portrait mode also delivers impressive edge detection.

BATTERY & CHARGING

With its 6000mAh battery, the V50 lasted approximately 11 hours in our screen-on-time test. In real-world usage, it easily gets through a day of heavy use.

The 90W fast charging capability takes the phone from 0 to 100% in about 55 minutes, which is quite efficient for a battery this large.

VERDICT

The big question: should you buy the Vivo V50? It starts at Rs 34,999 for the base (8GB+128GB) variant

and goes up to Rs 40,999 for the top (12GB+512GB) variant, which is the same as the V40 pricing when it launched last year.

The Vivo V50 feels more like a refined version of the V40 rather than a ground-breaking upgrade. However, it still excels in key areas such as premium design, solid cameras, reliable performance, and improved durability. If you're looking for a stylish phone with good cameras and battery life, the Vivo V50 is a great option. But, if raw performance is your priority, alternatives like the Poco F6 might be a better choice.
