

Audio Technica ATH-TWX7

Excellent audio, but at what cost?

Audio-Technica introduced their Audio Technica ATH-TWX7, their latest pair of true wireless earbuds aimed at delivering high-fidelity audio with effective noise cancellation, some time ago in the Indian market. Given Audio-Technica's reputation for balanced sound and premium build quality, expectations were high.

The ATH-TWX7 come packed with features such as LDAC support, active noise cancellation (ANC), and an extensive suite of customisation options via the A-T Connect app.

They also carry a price tag of ₹19,990, putting them in direct competition with offerings from Sony, Bose, and Apple. These include the Sony WF-1000XM5, the Bose QC Earbuds Ultra or WC Earbuds II (Depending on availability), and for the Apple folk, the Apple AirPods Pro Gen 2 (USB-C).

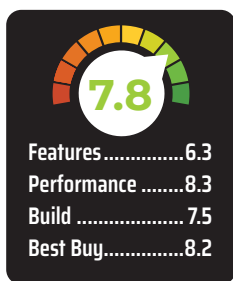

After spending a month with these earbuds, putting them through their paces in daily use and our test suite in the Digit Test Labs, here's what I found out.

BUILD AND DESIGN

The design of the ATH-TWX7 doesn't stray too far from what we've seen before. The case features a matte finish, a departure from the glossy norm, which helps with grip and minimises finger-print smudges.

The earbuds themselves have a stemmed design with a slight teardrop shape, making them more ergonomic than a typical stick-style earbud.

Out of the box, the build quality feels premium, and Audio-Technica has

included a generous selection of ear tips – eight in total – to help users find the best possible fit.

The fit itself is secure, though some may struggle to get a completely tight seal, which could impact sound performance.

However, my biggest gripe with the design is the controls. Audio-Technica has opted for a combination of touch sensors and physical buttons, which, while providing versatility, can be frustrating to use.

The touch sensors are overly sensitive, leading to accidental triggers, while the physical buttons require precise pressing, which isn't always intuitive.

FEATURES

On paper, the ATH-TWX7 come with a solid list of features. Here's a quick breakdown in the table highlighted below.

While these features contribute to an overall well-rounded experience, they aren't implemented as seamlessly as they could be.

For example, ANC is effective against low-frequency sounds but struggles with higher-pitched noises like voices or keyboard clatter. The transparency mode, while useful, doesn't sound as natural as some of its competitors.

PERFORMANCE AND BATTERY LIFE

Audio-Technica has built a reputation for its warm and balanced sound signature, and the ATH-TWX7 largely deliver on that front. The earbuds emphasise bass and lower mids, making them a great option for genres like hip-hop, jazz, and electronic music.

However, this tuning does come at the cost of some treble clarity, which might leave classical and rock enthusiasts wanting more.

The ANC implementation is decent but not exceptional. It cuts down background hums effectively but

FEATURE	REMARKS
Noise Cancellation	Good but not class-leading. Struggles with voices and midrange frequencies.
LDAC Support	Great for high-resolution audio, but battery life takes a hit.
Multi-point Connectivity	Works well, allowing seamless switching between devices.
Customisable EQ	Available through the app, making it easy to tweak the sound profile.
Touch & Physical Controls	Offers flexibility but can be finicky in actual use.
Transparency Mode	Functional but has a tendency to amplify certain noises too much.
