

doesn't eliminate external voices as well as competitors like the Sony WF-1000XM5.

Microphone performance is also a mixed bag – while calls in quiet environments sound clear, the earbuds struggle to suppress background noise in busier settings. Battery life is where the ATH-TWX7 take a noticeable hit. Audio-Technica claims 6.5 hours with ANC on, but

real-world usage suggests closer to 4.5-5 hours, making them one of the relatively weaker performers in their price bracket.

If battery longevity is a priority, there are better options out there. But these are not the worst either.

VERDICT

The Audio-Technica ATH-TWX7 sit in a competitive price bracket, and while

they bring a lot to the table – good sound, LDAC support, and a comfortable fit – they don't quite outshine the competition.

The controls can be frustrating, the ANC isn't the best, and the battery life is underwhelming considering the price you are paying for these. If you're an Audio-Technica fan who values sound quality above all else, these are definitely worth considering. But if you're looking for the best all-rounder in this price range, you might be better off exploring options like the Sony WF-1000XM5 or the Bose QuietComfort Earbuds II.
