

minimal even at higher volumes, which is a plus.

Battery life is one of the Willen II's standout features. Marshall claims 17+ hours of playback on a full charge, and in our testing, it lived up to this claim. At 50% volume, we got close to 16 hours before needing a recharge. A quick charge feature provides 5.5 hours

of playtime with just 20 minutes of charging, and a full charge takes around 2.5 hours via USB-C.

## VERDICT

The Marshall Willen II is an interesting proposition. It delivers the brand's signature aesthetic, a balanced sound profile, and excellent

battery life in a compact package. The build quality is top-notch, and the IP67 rating makes it a great outdoor companion. However, the lack of deep bass, limited EQ customisation, and the absence of AUX support might make some buyers look elsewhere.

If you're after a stylish, ultra-portable speaker with a focus on mids and highs, the Willen II is worth considering. However, if you prioritise bass and louder volume output, alternatives like the Sony SRS-XB13 or JBL Flip 6 might be better suited to your needs. For those looking for a budget-friendly entry into the Marshall ecosystem, though, the Willen II is a solid choice.
