

FEATURE	REMARKS
24/7 Temperature Tracking	Tracks body temperature variations but lacks direct fever detection.
ECG & Heart Rate Monitoring	The clinically validated ECG feature works well, but heart rate tracking is basic.
Sleep Tracking	Provides solid sleep stage analysis but isn't as detailed as Fitbit or Oura Ring.
Activity Tracking	Step tracking is accurate, but the absence of built-in GPS means you need your phone for location-based data.
Notification Support	Basic and text scroll slowly, making it impractical for quick glances.
Battery Life	Lasts up to 30 days, though heavy usage cuts it down to about 21-25 days.

could hint at potential illnesses or recovery trends.

This is a smartwatch that leans heavily on health tracking

Performance is where the ScanWatch 2 holds its ground. If you want a smartwatch that prioritises health tracking over smart features, this is one of the best hybrid options available. The heart rate monitoring is accurate for casual users, but athletes may find it lacking. ECG functionality works well, and the sleep tracking

is reasonably insightful. However, if you're expecting smartwatch features like music controls, app support, or payments, you won't find them here. The small display further limits the watch's usability in this regard. The connected GPS (relying on your phone) also feels like a missed opportunity. Battery life, though, is a strong point. In typical use, the ScanWatch 2 comfortably lasts over three weeks on a single charge. Charging is done via a proprietary docking station, and while you won't need it often, losing it could be frustrating.

Should you buy the Withings ScanWatch 2?

The ScanWatch 2 is for those who want a stylish, health-focused wearable without the constant distractions of a full smartwatch. It looks great, has useful health-tracking features, and boasts impressive battery life. However, at ₹34,999, it feels expensive for what it offers.

If you want a hybrid watch that does the basics well, the ScanWatch 2 is a solid choice. But if you need richer smart features or better fitness tracking, options like the Fitbit Charge 6 or even an Apple Watch SE might offer better value. **📌**
