

INDIA'S CHANGING TECH LANDSCAPE IN LAST TWO YEARS

JAYA VAIDHYATHAN, BCT DIGITAL

When I began my career, changes across the technology and the business environment were more gradual. The risk environment was stable, and technology investments were growing steadily. AI is already changing the game and boosting efficiency. Agility is key, and by listening closely to our clients and understanding their needs, we can transform challenges into opportunities. Those who are quick to identify and act on them will rise as market leaders – and we are positioned at the forefront of this change.

ANITA KAPOOR, LENOVO INDIA

India's tech landscape has seen explosive evolution in areas like AI, cloud and quantum computing, health-care, and fintech, among others. India's growing infrastructure and technological developments have opened newer avenues for both the youth and experienced professionals. The rate of innovation backed by technology in the country, supported and encouraged by the government through incentives, initiatives, and infrastructure, is commendable.

SHARMILA KHAN, MICRON INDIA

In the last two years, India has taken significant steps to improve the semiconductor ecosystem. Moreover, across our two R&D sites out of Bengaluru and Hyderabad, over the last 5 years, we have initiated R&D initiatives that are in every single category of our major product line. Micron has a unique footprint in India and is the only global major to be vested across the semiconductor value chain in India, encompassing design, engineering and (back end) assembly manufacturing.

KRITHIKA BHAT, PURE STORAGE

India's tech landscape has seen remarkable growth over the past two years, driven by rapid cloud adoption, AI innovation, and a heightened focus on sustainability. According to Nasscom, India's public cloud market is expected to reach \$17.8 billion by 2027, reflecting the increasing demand for agile and scalable infrastructure. Organizations are accelerating digital transformation, leveraging AI-driven insights, and rethinking data infrastructure to stay competitive.

ARCHANA BAJAJ, PEGASYSTEMS

By automating repetitive tasks like never before, AI is unlocking new levels of efficiency. With just a few clicks, building enterprise-grade applications has become faster and more intuitive, taking minutes instead of hours. From AI-powered agents and chatbots in people management and learning & development to intelligent document automation, we are enhancing productivity and streamlining processes across the board.

KALAVATHI GV, SIEMENS HEALTHINEERS

India has solidified its position as a global technology hub. The Indian technology sector has remained resilient, with AI, automation and digital transformation becoming increasingly pervasive across industries. In the healthcare sector, the acceleration of digital adoption, enhanced telemedicine and remote monitoring capabilities, push for personalized medicine, and the increasing role of AI in diagnostics and workflow automation have been defining shifts.
