

LEADERSHIP EVOLUTION TO MEET NEW CHALLENGES

KALAVATHI GV, SIEMENS HEALTHINEERS

With the rapid evolution of digital, tech and AI, leadership must adapt to keep pace with these changes and seize the opportunities unlocked by this transformation. Leaders today need to be more tech-savvy and actively embrace emerging technologies like AI and automation to drive efficiency and innovation. Equally important is empathetic leadership, helping teams navigate an increasingly dynamic and uncertain environment.

KRITHIKA BHAT, PURE STORAGE

With rapid tech change and digital disruption, my leadership approach has evolved to prioritize agility, collaboration, and empowerment – values that align closely with Pure Storage's culture. Building high-performing teams isn't just about skills – it's about bringing together individuals who complement, support, and learn from each other. Accountability is crucial, whether for successes or setbacks, and as a leader, my role is to enable my team to do their best work.

JAYA VAIDHYANATHAN, BCT DIGITAL

At the core, my leadership approach remains unchanged: hire people you trust and those who trust you and empower them. The rapid shifts in the risk environment, driven by AI and data, are reshaping the business world. In response, agility and the ability to adapt have become essential to delivering greater value to our clients. I prefer to maintain open lines of communication with investors and regulators and encourage my teams to actively listen to client feedback. My roles on various boards help me stay attuned to high-level issues and solutions, which I bring back to our organization to drive continuous improvement.

ARCHANA BAJAJ, PEGASYSTEMS

With rapid technological advancements and digital disruption, my leadership approach has evolved significantly. I now prioritize data-driven decision-making, leveraging advanced tools to minimize instinctual choices and reduce unconscious biases. In today's fast-paced environment, making quick, informed decisions is key to effective leadership. Additionally, fostering a culture of knowledge-sharing and self-improvement helps build resilient, adaptable teams that can navigate disruptions with confidence.

SHARMILA KHAN, MICRON INDIA

As leaders we need to adapt to innovations as the business environment changes quickly. Another opportunity is how as leaders we balance overload of information vs gut based decision making. As leaders, we now have access to more data than ever before and sometimes it can be overwhelming for leaders and make it hard to make smart judgements and sometimes too much information might make excellent decisions tougher or delayed.
