

THOUGHTS ON AI

JAYA VAIDHYATHAN, BCT DIGITAL

Our company has a dedicated research and development team that continuously explores emerging technologies. While we recognize the transformative potential of AI and machine learning, we prioritize aligning technology with our business needs. We ensure that we integrate these innovations thoughtfully, without applying them in a way that isn't suited to our goals or operations.

ANITA KAPOOR, LENOVO INDIA

Balancing bold innovation with risk requires constant vigilance. Lenovo's global ethical pillars help us make such decisions while safeguarding stakeholder interests. Adopting an experimental mindset with limited testing before full-scale launches and engaging with cross-border stakeholders are great ways to take measured steps and mitigate risk.

SHARMILA KHAN, MICRON INDIA

Micron leadership is aggressively looking at opportunities across all businesses to adopt AI to accelerate performance and productivity. There have been numerous initiatives across all functions within Micron to identify areas of opportunities and decipher inefficiencies around processes. We have been working on use cases early with the objective of adoption and making AI a way of life, supported and led by our executive leadership. Considering that experimentation and the learning loop are key to leveraging new opportunities, our engineers are encouraged to equip themselves with co-pilots, cross-share learning across functions, and continue evaluating and deploying tools within our guardrails.

ARCHANA BAJAJ, PEGASYSTEMS

As technology evolves, so does our approach. Beyond technical innovation, Pega also invests in leadership development – I had the opportunity to undergo ISB leadership training, equipping me with the skills to grow as a technical leader. By fostering both technical and leadership excellence, we ensure we are well-positioned to navigate and capitalize on emerging technologies like AI, machine learning, and quantum computing.

KRITHIKA BHAT, PURE STORAGE

At Pure Storage, we're transforming our operations by integrating generative AI across various business processes to improve productivity, efficiency, and customer satisfaction. Externally, we're helping customers accelerate and simplify their AI adoption with our high-performance AI storage platform. We're also focused on upskilling teams and maintaining strong data governance to ensure the ethical and effective use of AI while upholding data integrity across all initiatives.
