

ADVICE FOR WOMEN PROFESSIONALS

KALAVATHI GV, SIEMENS HEALTHINEERS

My professional journey began three decades ago. The engineer in me was always driven and coupled with my belief in servant leadership, enabled me to focus on building high performing teams, with a larger purpose. My advice is simple: keep learning, as there is always more to discover, it keeps you feeling young. Never wait for external validation. Trust in yourself, follow your instincts, and stay true to who you are. Take the leap and things will fall into place.

KRITHIKA BHAT, PURE STORAGE

My advice to young women entering tech is simple: be fearless. Seek mentors, build a strong support network, and never stop learning. Confidence and perseverance are crucial in overcoming challenges, and your unique perspective will contribute to innovation. Don't hesitate to advocate for yourself and others – representation truly matters in our industry. The tech world thrives on diversity, and it's important to challenge barriers, embrace your ambitions, and take your rightful place as future leaders in technology.

ARCHANA BAJAJ, PEGASYSTEMS

My advice to young women aspiring to build a career in tech is to start by cultivating confidence – believe in your abilities and pursue technology with passion. Seek mentorship early, as the right mentors can provide guidance, help navigate challenges and unlock new opportunities. Finally, prioritize work-life balance. Success is not just about professional milestones but also about maintaining well-being and nurturing personal relationships. A fulfilling career is one that allows you to grow while staying true to yourself.

SHARMILA KHAN, MICRON INDIA

I would advise young professionals to be resilient. The tech industry is very demanding and you need to constantly update yourself with the latest technology trends and always keep learning. You need to keep pushing forward by taking courses or training classes to improve your knowledge and skills. Invest in yourself, find a mentor who can offer you guidance and support in navigating the industry.

ANITA KAPOOR, LENOVO INDIA

The tech industry offers a host of opportunities. Gone are the days when tech positions were equated only with coding, product development, or UI. Every vertical and profession has now transformed with technology, each with its unique set of demands and skill sets. My advice is to break the mould and not be bound by the past. Think fresh, act fast! Continuously challenge yourself and learn every step of the way.

JAYA VAIDHYANATHAN, BCT DIGITAL

Technology and science are harbingers of meaningful change. They equip young girls and working women professionals with the tools and skills to look at challenges from a unique vantage point. Once they've analyzed the challenges thoroughly, they have the wherewithal to imagine and create incredible solutions that can positively impact organizations they work at, societies and their countries. That said, my clarion call for young girls and women professionals is 'Think Big or Go Home'.
