

Microsoft Edge better than Chrome?

I ditched Chrome for Edge, and my laptop stopped struggling

Agent001 | agent001@digit.in

The other day, I found myself staring at my laptop screen, frustrated yet again as Chrome guzzled up my RAM like it was an all-you-can-eat buffet. My browser was lagging, my videos were stuttering, and I was seconds away from rage-quitting my entire workflow. That's when I decided to

give Microsoft Edge a shot – and, honestly? It was like flipping a switch. Everything just worked better. If you've ever dealt with sluggish performance or watched your laptop turn into a space heater thanks to Chrome, Edge's memory management might just be the upgrade you didn't know you needed.

Chrome has been the default choice for millions, but let's be honest – it's a notorious RAM guzzler. If you've ever checked your Task Manager and seen Chrome hogging a ridiculous amount of memory, you're not alone. But Edge? It takes a far more intelligent approach to memory management, and the difference is noticeable.
