

This will ensure minimal frame drop while gaming. Speaking of which, during extensive sessions of BGMI, this phone managed to maintain an average frame rate between 88 and 90 fps, which is impressive.

The power of this smartphone is definitely something that should be appreciated. Games such as BGMI, Genshin Impact, and more take a lot of storage, and if you're buying the Neo 10R for gaming purposes only, you might want to opt for the 256GB storage variant instead of the base variant which comes with 128GB of native storage.

OS

While the iQOO Neo 10R offers an advanced and smooth feel on the software front, it lacks in offering a clean UI. The FunTouchOS 15 on the iQOO Neo 10R is loaded with several pre-installed apps. While some of these such as Facebook, Amazon, and Instagram, should be useful, I also noticed a handful of bloatware gaming apps that most users will likely need to uninstall.

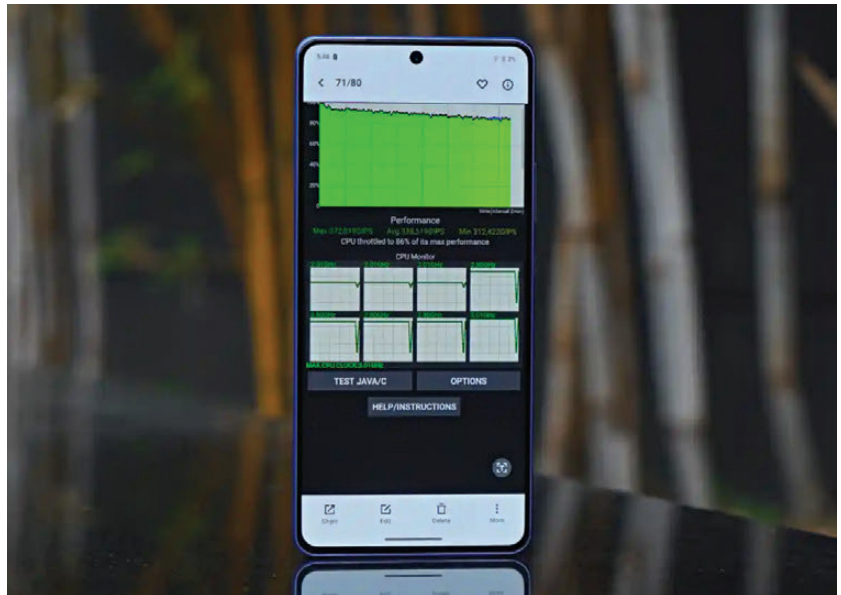

CAMERA

The main focus of the iQOO Neo 10R is the performance, and even the brand is not highlighting its camera as much. So, I did not have great expectations in this regard, but here's what I found!

The 50-megapixel main camera on the iQOO Neo 10R clicks sharp pictures. We could notice fine details in this picture of the miniature Spider-Man. There is no optical zoom on this smartphone, but still, pictures clicked with 2x digital zoom turned out pretty appealing.

Apart from details, it also captures vibrant colours and sometimes they even feel a tad over-saturated. At the end of the day, if you look at this from a performance-phone perspective, the primary camera is pretty good.

While using the portrait mode, I noticed two things: under good lighting, the portrait shots turned out decent. However, if you take portraits at sunset, the pictures become overly smooth, and the edge detection often gets messed up.

Still, I had fun using the camera of the iQOO Neo 10R until I switched to the ultrawide frame. The ultrawide shots lose details and the pictures turn out grainy if the lighting is less than ideal. But isn't that to be expected of all mid-range phones?

And lastly, under moderate light, the iQOO Neo 10R captures crisp and vibrant pictures. It also manages light decently and there's very little light bleeding. Some pictures might feel too vibrant but overall picture quality is excellent on the iQOO Neo 10R.

BATTERY

The iQOO Neo 10R is packed with a massive 6400mAh battery and supports 80-watt fast charging. The battery backup of this smartphone really surprised me and in the PCMark Battery Life test, the Neo 10R lasted for 22 hours and 49 minutes and still had 20% remaining in the tank.

Moreover, in a 15-minute COD match, it consumed just 5% battery and just 4% battery drained while streaming HDR content on Netflix for 30 minutes. The bottom line is that along with extreme performance, this smartphone also offers an excellent battery backup. On a single charge, you can use this smartphone for up to 2-3 days of moderate use.

Speaking of charging, I charged this smartphone from 0-100% in 67 minutes, which is not a bad number for a 6400mAh battery.

VERDICT

One thing I'll say without mincing my words – the iQOO Neo 10R is an impressive phone for gaming enthusiasts. It offers a 144Hz panel, top-notch power, a long-lasting battery life, and stable performance – everything you need for extreme mobile gaming.

Apart from that, the camera of this smartphone is decent for the price you are paying. The only downside is the bloatware in its software, which can be deleted. However, make sure to put it in a sturdy case.

–Mustafa Khan

SPECIFICATIONS

Processor: Snapdragon 8s Gen 3 | GPU: Adreno 735 | RAM: 12 GB LPDDR5X | Storage: 128 GB UFS 3.1 | 256 GB UFS 4.1 | OS: Android 15, Funtouch OS 15 | Display: 6.78" AMOLED, 2800 x 1260 pixels, HDR10+ | Refresh Rate: 120Hz/144Hz | IP Rating: IP65 | Cameras: 50 MP + 8 MP | Selfie Camera: 32 MP | Video: Up to 4K at 60 fps | Battery Capacity: 6,400 mAh Si/C | Charging: 80 W (wired)
