

Vivo T4x 5G

A Budget Phone That Doesn't Suck

Have you ever thought about how many good phones are there in the mid-range and premium segment? But getting a good phone under Rs 15,000 is always a challenge because you will always have to compromise on one thing or the other. That's why today, we have the Vivo T4x 5G with us, and it seems like an interesting phone if you are looking for one under this budget

Now, Vivo smartphones are majorly about cameras and displays, but the T4x 5G is an exceptional case just like its predecessor. The USP of this Vivo smartphone is neither the camera nor the display, but performance. However, within this budget, what level of performance can you expect? Let's find out in our Vivo T4x 5G review!

BUILD AND DESIGN

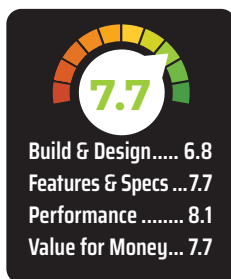

We have the Vivo T4x 5G in Marine Blue colour, which has a glittery effect on the back. Now liking this back panel can be a very subjective opinion because some of you might not like it. But if you ask me, the pattern looks really good.

You can also find a ring light on the back which goes by the name of Dynamic Light in the phone's Settings. But note that this is not a flashlight, it is only there for notifications, alerts, calls and charging indications.

Now, about its durability, there is good news and bad news for you. The good news is that the Vivo T4x 5G comes with an IP64 rating against dust and water, which is not usual on budget smartphones. What's bad is that there is no strong protection on the display. So, if your phone drops, you better have your expenses ready for the repair.

DISPLAY

Coming to its display now, the T4x 5G

features a 6.72-inch IPS LCD panel, which comes with an FHD+ resolution and 120Hz refresh rate support. The first thing that you will notice on its display is that the colours of this panel are quite punchy, which we don't get on IPS LCD panels usually.

Along with that, the brightness of this display is also convincing, as we recorded around 900 nits of peak brightness during our testing. This means that even if you use the phone under direct sunlight, the price is respectable.

Yes, one thing that I feel could have been better is the dynamic range. The contrast in the visuals is expected less than what we expect on OLED displays, which also makes images appear less sharp.

PERFORMANCE

Performance is the most interesting part about the Vivo T4x 5G, and yes I am saying this positively. We have

tested the Vivo T4x 5G through several benchmarks and stress tests, so let's talk numbers first.

In AnTuTu, the Vivo T4x 5G scored higher not only from its true competitors but also from the phones that are pricier such as Poco M6 Plus, CMF Phone 1, and OnePlus Nord CE4 Lite 5G.

Even in Geekbench, the Vivo T4x 5G performed really well as you can see it gave a really good fight to the other phones under Rs 20,000.

After testing the power of this phone, it was about time we tested how stable this phone is and how is its thermal management. And guess what? After running a stress test for 20 minutes, the Vivo T4x 5G did not throttle even a single per cent. This means the thermal management and the optimisation of the processor on this phone is promising.

All these numbers were very impressive to me, but again these are just numbers. How's the real-world usage? This is where things go south.

The performance of this phone is decent, be it heavy gaming or everyday tasks but the UI is one missing piece from the puzzle. The Vivo T4x 5G runs on FuntouchOS 15, which feels nice but doesn't look nice. It looks very cluttered and all the credit goes to pre-installed apps.

CAMERA

The Vivo T4x 5G has a dual camera setup consisting of a 50-megapixel main camera and a 2-megapixel depth sensor. For selfies, you are getting an 8-megapixel front camera on it.

The 50MP main camera captures vibrant pictures, they are bright and colourful. Now I like colourful pictures, while some people don't, and again this can be also subjective. The camera on the Vivo T4x 5G also captures details just fine. They are not too good or too bad and under good lighting conditions, you can capture decent photos with this phone.

However, when it comes to portraits, they seem pretty contrasty. It misses out on details when it comes to the
