

ASUS TUF Gaming F16

Good value but wait for sale

The ASUS TUF Gaming F16 (2025) is ASUS' latest attempt to make

gaming laptops more affordable without compromising on core features. Priced at ₹80,990, it enters a highly competitive mid-range segment but brings with it an interesting mix of updated chassis and slightly older internals. While it's not a spec monster, the F16 aims to be a reliable everyday gaming companion with enough horsepower for popular AAA and esports titles, wrapped in a durable and no-nonsense design.

₹80,990

DESIGN, BUILD QUALITY, KEYBOARD AND TOUCHPAD

The 2025 refresh brings a new chassis that stays true to the TUF series' rugged, understated look. It's built using premium-grade plastic that not only feels solid in hand but also helps keep the weight manageable. The chassis is largely flex-free, especially around the keyboard deck and palm rest areas, which speaks to its structural integrity. It also does a good job of resisting fingerprints and smudges, making it ideal for everyday use.

Visually, the laptop looks more refined this time around, with narrower bezels that give it a more modern and compact feel despite sporting a 16-inch display. The angular edges and subtle TUF branding keep it aligned with the brand's tough-gaming DNA without making it look overly aggressive or flashy.

The keyboard is full-sized and includes a dedicated numpad, which is great for productivity tasks like data

entry or spreadsheets. The keys themselves are well-spaced, tactile, and offer satisfying travel, making them comfortable for both extended gaming sessions and long hours of typing. The WASD keys have a slightly

highlighted design, which adds a touch of gamer flair without going overboard.

The touchpad is generously sized, smooth, and very responsive to gestures. It has a matte finish that feels nice to the touch and doesn't register accidental inputs easily. The top-right corner of the touchpad also features the ASUS TUF logo, a small but distinctive detail that adds to the laptop's overall character without being distracting.

DISPLAY AND SPEAKERS

One of the strongest points of the ASUS TUF Gaming F16 is its 16-inch FHD+ display with a tall 16:10 aspect ratio. The 90% screen-to-body ratio gives the laptop a modern, immersive feel, and the thinner bezels help make full use of the larger screen size without making

the device feel bulky. The matte anti-glare coating does an excellent job at cutting down reflections, which makes the display particularly pleasant to use in well-lit indoor environments like classrooms or offices.

The panel itself offers good viewing angles, with minimal colour and contrast shift even when viewed from the sides, which is great for sharing your screen or watching content from different positions. The 144Hz refresh rate combined with a 3ms response time ensures smooth motion in games and general usage, whether you're scrolling through web pages or engaging in fast-paced shooters. It's a noticeable improvement over standard 60Hz panels and helps

bring an extra layer of fluidity to the overall experience.

Brightness peaks at 300 nits, which is decent for most

indoor situations, though you might struggle under direct sunlight. Colours are reasonably accurate for general use and media consumption, though creators looking for colour-critical work may still want to connect an external calibrated display.

As for audio, the built-in speakers are serviceable. They're loud enough for casual use, watching YouTube videos, meetings, or in-game audio cues, but lack depth and bass. For a more immersive experience, especially in FPS titles or cinematic games, a good pair of headphones or external speakers is recommended.

PERFORMANCE AND BENCHMARKS

As mentioned, the ASUS TUF Gaming F16 features a combination of the Intel Core Ultra 5 210H processor and the Nvidia GeForce RTX 3050 Ampere edition with 4GB of GDDR6 VRAM. However, when compared to two other popular laptop GPUs, the RTX 4050 and RTX 4060, the RTX 3050 falls behind. In 3DMark's TimeSpy and Fire Strike benchmarks, the RTX 4060 (as seen in the Lenovo model) proves to
